

EAL Conversion Services

for your RoRo equipment

At your service

MACGREGOR

Designed to perform with the sea

A MacGregor EAL Conversion is the easiest and safest way for RoRo shipowners to come closer to the 'greener shipping' industry vision. EAL Conversion makes the switch from standard mineral oil to the latest generation EAL hydraulic oil: MacGregor GreenFluid HY swiftly and safely.

An EAL Conversion starts with a pre-assessment of your vessel and applications, carried out by specially trained MacGregor service engineers. We understand that every vessel and application is different, and so are our customers. Our unique knowledge about the hard parts and applications, combined with our own qualified EAL GreenFluid HY hydraulic oil eliminates risks for customers.

By choosing an EAL Conversion, you get more than a simple service and a lubricant. You buy a qualified proven conversion package with all the benefits from the market leader MacGregor.

If this is not enough, MacGregor has also developed a device to measure the percentage of mineral oil in the system. This makes us the only supplier who can guarantee that your system follows EAL guidelines.

Advantages offered by EAL Conversion

- Specially trained service engineers
- Pre-assessment on site and at our competence centres
- Lubricants are qualified to eliminate issues with sealings
- Higher lubricity, i.e. less wear and heat generation
- MacGregor OEM guarantee
- No risk of oil-spill fines

MacGregor Green Ocean lubricants are available globally and provided by MacGregor Global Lifecycle Support. For further information, please contact your MacGregor Account Manager or send an email to macgregor.service@macgregor.com

MacGregor shapes the offshore and marine industries by offering world-leading engineering solutions and services with a strong portfolio of MacGregor, Hatlapa, Porsgrunn, Pusnes and Triplex brands.

MacGregor is part of Cargotec (Nasdaq Helsinki: CGCBV).
