Maintenance Course

The Maintenance Course is on site-training, based on the actual equipment and machine software used in the customer's crane.

TTS Training Program

TTS GROUP ASA

Product Description

The TTS Maintenance Course purpose is to train the crane operational and maintenance crews by providing familiarization of the machinery and control stations, electrical and hydraulic schematics and equipment, manual operation and spare parts ordering.

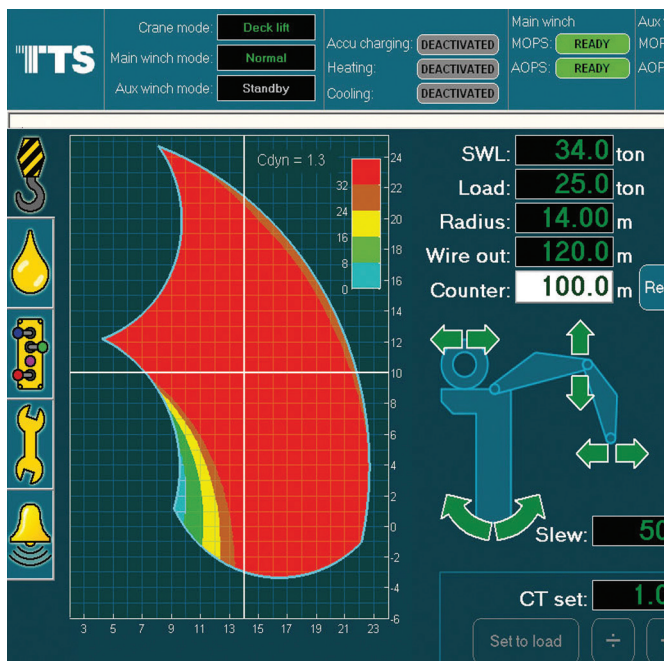

In addition this Maintenance Course also aids in internal training to ensure that our service personnel are always updated with the latest features and equipment.

To achieve a realistic experience the TTS Maintenance Course is based on the actual equipment and machine software that is used on the customer's crane.

The TTS Maintenance Course can be tailor made for the customer's crane and can be held as theoretical or as a combination of theory/ practical on site.
