

# TTS BRAKE RING REPAIR

REPAIR CORROSION AND SURFACE CRACKS ON THE BRAKE RING

**TTS**

A MacGregor Company

TTS OFFERS REPAIR  
SERVICES FOR  
CORRODED AND  
COMPROMISED BRAKE  
RINGS.

Due to exposure, lack of maintenance or other factors, the metal on the brake ring can begin to corrode and break down. This affects the brake holding force and the life of the product.

TTS offers a simple repair solution that repairs the damaged brake ring and slows down the process of corrosion. This solution uses a cold welding 2-component repair system on a polymer base.

In as little as two to three days, your damaged brake ring can be up and running again smoothly.
